

New Relic Plugin for Cloud Foundry

Key Benefits

- 425+ health, availability and performance metrics
- Immediate, automatic alerts to identify issues
- New Relic Insights enabled for deeper analysis

See More Cloud Foundry Metrics

Gain access to hundreds of metrics with the Blue Medora Cloud Foundry Plugin. See how your workloads are performing with the ability to view key performance metrics, like average CPU usage, dropped messages rate, requests rate and used memory.

In addition, the plugin includes out-of-the-box dashboards and reports so you can drill down into your workloads and connect the dots across your IT stack.

Leverage Instant Alerts & Notifications

Extend your Cloud Foundry monitoring with access to instant alerts and notifications. Alerts can be established with system-configured thresholds, or you can define your own.

As a result, garner insight into the performance of your workloads so you can easily and quickly pinpoint issues when they arise and reduce troubleshooting time.

Extend Monitoring with New Relic Insights

With a seamless integration with New Relic Insights, extend monitoring beyond visibility into new metrics with the ability to use the system's intuitive, graph-based monitoring reports.

Leverage NRQL queries and data apps to dig deeper into your data with key correlations and customizable dashboards. Clearly understand how your Cloud Foundry workloads are performing and optimize performance across your entire IT stack.

Plugin Requirements

Before installing and configuring the plugin, ensure your system meets the following requirements:

New Relic

A New Relic Account

Cloud Foundry

Get up and running quickly with the following requirements:

- Cloud Foundry
- Blue Medora Nozzle
