

New Relic Plugin for F5 BIG-IP

Key Benefits

- 50+ health, availability and performance metrics
- Immediate, automatic alerts to identify issues
- New Relic Insights enabled for deeper analysis

See How F5 BIG-IP Workloads Perform

Extend your monitoring to gain deep insight into your F5 BIG-IP environment. With the Blue Medora F5 BIG-IP Plugin, you can access hundreds of metrics – including disk usage, memory usage, current connections, current sessions and client side throughput – to gain true visibility into performance.

In addition to more metrics, the plugin offers a series of out-of-the-box dashboards and reports for you to analyze your data further in order to drive optimal performance from your F5 environment.

Gain Access to Alerts & Notifications

Gain instant and automatic access to alerts and notifications that give you insight into system performance.

Use system-configured thresholds or define your own to transform the troubleshooting process and pinpoint issues faster and more efficiently than ever before.

Dive Deeper Into Your F5 BIG-IP Data with New Relic Insights

The F5 BIG-IP Plugin takes metrics to another level with a seamless integration with New Relic Insights, which, combined with NRQL queries, allow you to dive deep and correlate any of your data. Extend visibility with access to intuitive, graph-based monitoring reports and dashboards.

As a result, spend less time figuring out where the bottleneck resides and more time focused on how to optimize your F5 BIG-IP environments to improve the performance of your entire IT stack.

Plugin Requirements

Before installing and configuring the plugin, ensure your system meets the following requirements:

New Relic

A New Relic Account

F5 BIG-IP

The plugin supports the following versions of F5 BIG-IP:

- Version 11.5.0+ through REST
