12.1.0.9.0	September 2014	General updates
12.1.0.8.0	January 2014	Added Oracle cluster database support on virtual machines
12.1.0.7.0	July 2013	Initial release

3. Applicable Platforms

For details, see the *Blue Medora Oracle Enterprise Manager Plugin for VMware User Guide*, which can be found at: <http://support.bluemedora.com>.

4. Notable Features

The VMware plugin for Oracle Enterprise Manager is optimized for **Oracle Enterprise Manager Cloud Control 12c/13c** with features such as:

- **Key performance metrics** such as CPU, disk, and memory utilization; disk read/write throughput; disk total capacity; and ballooned memory
- **Management capabilities for VMware virtual machines (VMs)**, using job commands such as power on/off, suspend, reset, reconfigure, and clone
- **VMware resource-focused performance reports** through integration with BI Publisher

5. Installation Prerequisites & Instructions

For detailed information on installing and configuring the plugin, please see the *Blue Medora Oracle Enterprise Manager Plugin for VMware User Guide*, which can be found at: <http://support.bluemedora.com>.

6. Known Issues/Limitations

None at this time

You can find the most up-to-date technical documentation on the Blue Medora support site at: <http://support.bluemedora.com>.

The Blue Medora website also provides the latest product updates. If you have comments about this documentation, submit your feedback to: support@bluemedora.com.
